

22. (New) A detergent particle according to Claim 1 wherein said particulate component comprises one or more detergent ingredients selected from surfactants, builders, bleaching agents, enzymes, suds suppressors, and mixtures thereof.
- 23 (New) A detergent particle according to Claim 19 wherein said particulate component comprises crystalline sodium citrate, citric acid, or mixtures thereof.
- 24 (New) A detergent particle according to Claim 23 wherein said particulate component further comprises a colorant.
- 25 (New) A process according to Claim 8 wherein said process further comprises the step of coating said particulate component with an admixture comprising said light reflecting component and a binding material.
- 26 (New) A process according to Claim 25 wherein said binding material comprises a nonionic surfactant, a polyalkylene glycol, or mixtures thereof.
27. (New) A composition according to Claim 12 wherein said particle has a luster index exceeding the luster index of sodium citrate dihydrate wherein further the sodium citrate particles have a particle size of from 355 microns to 600 microns and a mean particle size of 450 microns.

REMARKS

Claims 2-12, 14 and 16-17 have been canceled without prejudice. Claims 1, 13, 15, and 18-27 are pending in the present application. Claims 18-27 have been added to particularly point out and distinctly claim the subject matter of the present invention. Applicant acknowledges there were two Claim 17's in the original application both of which have been canceled without prejudice. Antecedent basis for Claims 18-27 is found throughout the specification and original Claims 1-17.
